**Art Rejections:**

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goldhaber et al, U.S. pat. No. 5,794,210.

Goldhaber discloses a system and method for enabling controlled sharing of user's information in a network comprising:

a) storing in a profile database user's record corresponding to each user, each record comprising a public information (interest profile) that can be shared with other users or service providers and a private information (contact and account

information) that cannot be shared without user permission (see col 12, line 20 - col 14, line 10),

b) in response to a first request signal transmitting the public information associated with the user to a provider (col 15, lines 57-60),

c) in response to a second request signal transmitting the private information associated with the user to a provider only with permission from the user (see col 7, lines 62-67 and col 19, lines 57-61).

Goldhaber does not explicitly teach using a symbol to identify the user. An official notice is taken that the use of a name or ID for identifying user on the network is well known in the art.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize a name or ID for identifying user on Goldhaber's network because it would have enabled users and service providers to communicate with each others on the network.

Per claim 2, it is noted that the use of authentication information for verifying legitimate service provider is well known in the art.
